Chapter 4

Data Structure Index

4.1 Data Structures

Here are the data structures with brief descriptions:

jeod::NutationJ2000	Implements the nutation portion of the J2000 RNP	19
jeod::NutationJ2000Init	The NutationJ2000Init contains coefficients and other data used to initialize a NutationJ2000 object	28
jeod::NutationJ2000Init_nutation_j2000_default_data	33
jeod::NutationMars	Implements the nutation portion of the "Pathfinder" Mars RNP model	33
jeod::PlanetOrientation	The generic framework for orientation models to interact with a DynManager object	39
jeod::PlanetRNP	The generic framework for orientation models based on the RNP paradigm	46
jeod::PlanetRotation	The generic base class for all planet transformations	52
jeod::PlanetRotationInit	The generic base class for all initializing classes for PlanetRotation derived classes	59
jeod::PolarMotionJ2000	Implements the polar motion portion of the J2000 RNP	61
jeod::PolarMotionJ2000Init	Initializes the PolarMotionJ2000 object	67
jeod::PolarMotionJ2000Init_xpyp_daily_default_data	71
jeod::PolarMotionJ2000Init_xpyp_monthly_default_data	71
jeod::PrecessionJ2000	Implements the precession portion of the J2000 RNP	72
jeod::PrecessionMars	Implements the axial rotation portion of the "Pathfinder" Mars RNP model	74
jeod::RNPJ2000	Implements the J2000 RNP model using the generic RNP framework	79
jeod::RNPJ2000_rnp_j2000_default_data	87
jeod::RNPMars	Implements the "Pathfinder" Mars RNP model using the generic RNP framework	88
jeod::RNPMars_rnp_mars_default_data	96
jeod::RNPMessages	Describes messages used in the RNP model	97
jeod::RotationJ2000	Implements the axial rotation portion of J2000 RNP	100
jeod::RotationMars	Implements the axial rotation portion of the "Pathfinder" Mars RNP model	104

Chapter 5

File Index

5.1 File List

Here is a list of all files with brief descriptions:

GenericRNP/include/class_declarations.hh	
Forward declarations of classes defined for JEOD 2.0 Generic RNP	109
RNPJ2000/include/class_declarations.hh	
Forward declarations of classes defined for JEOD 2.0 J2000 RNP	109
data_nutation_j2000.cc	110
data_rnp_j2000.cc	110
data_rnp_mars.cc	111
nutation_j2000.cc	
Implementation for the NutationJ2000 class	112
data/include/nutation_j2000.hh	112
include/nutation_j2000.hh	
Model the nutation portion of the RNP routine for the Standard Epoch J2000 This is form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52	112
nutation_j2000_init.cc	
Implementation of NutationJ2000Init	113
nutation_j2000_init.hh	
Used to load data and initialize the NutationJ2000 class through NutationJ2000::initialize	113
nutation_mars.cc	
Implementation for the NutationMars class	114
nutation_mars.hh	
Represent the nutation portion of the JPL-developed "Pathfinder" Mars orientation model	114
planet_orientation.cc	
Implement PlanetOrientation	115
planet_orientation.hh	
Establish a pure virtual framework for interfacing with the DynManager to set a planet orientation, meaning the transformation information from a planet's inertial frame to it's planet fixed frame	115
planet_rnp.cc	
Implement PlanetRNP	116
planet_rnp.hh	
Establish a framework for rotation-nutation-precession style planet attitude models	116
planet_rotation.cc	
Implemenation for PlanetRotation	117
planet_rotation.hh	
Pure virtual polymorphic base class for all forms of planet rotation in th RNP model including precession, nutation, polar motion and axial rotation	117

planet_rotation_init.hh	Pure virtual polymorphic base class meant to be used by PlanetRotation::initialize when a large amount of data that could possibly change must be used for rotation calculation	118
polar_motion_j2000.cc	Implementation of PolarMotionJ2000	118
polar_motion_j2000.hh	Model the polar motion portion of the RNP routine for the Standard Epoch J2000	119
polar_motion_j2000_init.cc	Implementation for PolarMotionJ2000Init	119
polar_motion_j2000_init.hh	Used to load data and initialize the PolarMotionJ2000 class through PolarMotionJ2000::initialize	120
precession_j2000.cc	Implementation for PrecessionJ2000	120
precession_j2000.hh	Model the precession for the RNP routine for the Standard Epoch J2000 This is a form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52	121
precession_mars.cc	Implementation of PrecessionMars	121
precession_mars.hh	Represent the precession portion of the JPL-developed "Pathfinder" Mars orientation model . .	122
rnp_j2000.cc	Implementation for RNPJ2000	122
data/include/rnp_j2000.hh		123
include/rnp_j2000.hh	A specific implementation of PlanetRNP, for Earth	123
rnp_mars.cc	Implementation of RNPMars	124
data/include/rnp_mars.hh		124
include/rnp_mars.hh	A specific implementation of PlanetRNP, for Mars	125
RNP_messages.cc	Implement RNP_messages	125
RNP_messages.hh	Implement RNP_messages	126
rotation_j2000.cc	Implementation of RotationJ2000	126
rotation_j2000.hh	Model the axial rotation portion of the RNP routine for the Standard Epoch J2000	127
rotation_mars.cc	Implementation of RotationMars	127
rotation_mars.hh	Represent the axial rotation portion of the JPL-developed "Pathfinder" Mars orientation model .	128
xpyp_daily.cc		128
xpyp_daily.hh		129
xpyp_monthly.cc		129
xpyp_monthly.hh		130

6.4.1 Detailed Description

6.5 RNPJ2000

Files

- file [RNPJ2000/include/class_declarations.hh](#)
Forward declarations of classes defined for JEOD 2.0 J2000 RNP.
- file [include/nutation_j2000.hh](#)
Model the nutation portion of the RNP routine for the Standard Epoch J2000 This is form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52.
- file [nutation_j2000_init.hh](#)
Used to load data and initialize the NutationJ2000 class through NutationJ2000::initialize.
- file [polar_motion_j2000.hh](#)
Model the polar motion portion of the RNP routine for the Standard Epoch J2000.
- file [polar_motion_j2000_init.hh](#)
Used to load data and initialize the PolarMotionJ2000 class through PolarMotionJ2000::initialize.
- file [precession_j2000.hh](#)
Model the precession for the RNP routine for the Standard Epoch J2000 This is a form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52.
- file [include/rnp_j2000.hh](#)
A specific implementation of PlanetRNP, for Earth.
- file [rotation_j2000.hh](#)
Model the axial rotation portion of the RNP routine for the Standard Epoch J2000.
- file [nutation_j2000.cc](#)
Implementation for the NutationJ2000 class.
- file [nutation_j2000_init.cc](#)
Implementation of NutationJ2000Init.
- file [polar_motion_j2000.cc](#)
Implementation of PolarMotionJ2000.
- file [polar_motion_j2000_init.cc](#)
Implementation for PolarMotionJ2000Init.
- file [precession_j2000.cc](#)
Implementation for PrecessionJ2000.
- file [rnp_j2000.cc](#)
Implementation for RNPJ2000.
- file [rotation_j2000.cc](#)
Implementation of RotationJ2000.

7.1 jeod Namespace Reference

Namespace jeod.

Data Structures

- class [NutationJ2000](#)
Implements the nutation portion of the J2000 RNP.
- class [NutationJ2000Init](#)
The [NutationJ2000Init](#) contains coefficients and other data used to initialize a [NutationJ2000](#) object.
- class [NutationJ2000Init_nutation_j2000_default_data](#)
- class [NutationMars](#)
Implements the nutation portion of the "Pathfinder" Mars RNP model.
- class [PlanetOrientation](#)
The generic framework for orientation models to interact with a [DynManager](#) object.
- class [PlanetRNP](#)
The generic framework for orientation models based on the RNP paradigm.
- class [PlanetRotation](#)
The generic base class for all planet transformations.
- class [PlanetRotationInit](#)
The generic base class for all initializing classes for [PlanetRotation](#) derived classes.
- class [PolarMotionJ2000](#)
Implements the polar motion portion of the J2000 RNP.
- class [PolarMotionJ2000Init](#)
Initializes the [PolarMotionJ2000](#) object.
- class [PolarMotionJ2000Init_xpyp_daily_default_data](#)
- class [PolarMotionJ2000Init_xpyp_monthly_default_data](#)
- class [PrecessionJ2000](#)
Implements the precession portion of the J2000 RNP.
- class [PrecessionMars](#)
Implements the axial rotation portion of the "Pathfinder" Mars RNP model.
- class [RNPJ2000](#)
Implements the J2000 RNP model using the generic RNP framework.
- class [RNPJ2000_rnp_j2000_default_data](#)

- class [RNPMars](#)
Implements the "Pathfinder" Mars RNP model using the generic RNP framework.
- class [RNPMars_rnp_mars_default_data](#)
- class [RNPMessages](#)
Describes messages used in the RNP model.
- class [RotationJ2000](#)
Implements the axial rotation portion of J2000 RNP.
- class [RotationMars](#)
Implements the axial rotation portion of the "Pathfinder" Mars RNP model.

7.1.1 Detailed Description

Namespace jeod.

Chapter 8

Data Structure Documentation

8.1 jeod::NutationJ2000 Class Reference

Implements the nutation portion of the J2000 RNP.

```
#include <nutation_j2000.hh>
```

Inheritance diagram for jeod::NutationJ2000:

Public Member Functions

- `NutationJ2000 ()`=default
- `~NutationJ2000 ()` override
destructor
- `NutationJ2000 & operator= (const NutationJ2000 &)=delete`
- `NutationJ2000 (const NutationJ2000 &)=delete`
- `void update_rotation ()` override
Specific implementation of update_rotation, from the polymorphic pure virtual base class PlanetRotation.
- `void initialize (PlanetRotationInit *init)` override
Initialize the various coefficients needed for the calculation of nutation.

Data Fields

- unsigned int `num_coefs` {}
The number of coefficients in the 9 arrays directly following this declaration.
- double * `L_coefs` {}
The coefficients to calculate mean anomaly of the moon.
- double * `M_coefs` {}
The coefficients to calculate mean anomaly of the sun.

- double * [F_coeffs](#) {}
The coefficients to calculate mean argument of latitude of the moon.
- double * [D_coeffs](#) {}
The coefficients to calculate mean elongation from the sun.
- double * [omega_coeffs](#) {}
The coefficients to calculate the right ascension of the ascending node of the mean mean lunar orbit.
- double * [long_coeffs](#) {}
Zero order (in time) coefficients for calculating the nutation in longitude.
- double * [long_t_coeffs](#) {}
The first order (in time) coefficients for calculating the nutation in longitude.
- double * [obliq_coeffs](#) {}
Zero order coefficients for calculating the nutation in obliquity.
- double * [obliq_t_coeffs](#) {}
First order coefficients for calculating the nutation in obliquity.
- double [nutation_in_longitude](#) {}
The nutation in longitude from the last call of update.
- double [nutation_in_obliquity](#) {}
The nutation in obliquity from the last call of update.
- double [L](#) {}
Last calculated mean anomaly of the moon.
- double [M](#) {}
Last calculated mean anomaly of the sun.
- double [F](#) {}
Last calculated mean argument of latitude of the moon.
- double [D](#) {}
Last calculated mean elongation from the sun.
- double [omega](#) {}
Last calculated ascension of the ascending node of the mean lunar orbit.
- double [epsilon_bar](#) {}
Last calculated mean obliquity of the ecliptic.
- double [equa_of_equi](#) {}
Last calculated equations of the equinox.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__NutationJ2000](#) ()

Additional Inherited Members

8.1.1 Detailed Description

Implements the nutation portion of the J2000 RNP.

Definition at line 90 of file include/nutation_j2000.hh.

8.1.2 Constructor & Destructor Documentation

8.1.2.1 NutationJ2000() [1/2]

```
jeod::NutationJ2000::NutationJ2000 ( ) [default]
```

8.1.2.2 ~NutationJ2000()

```
jeod::NutationJ2000::~~NutationJ2000 ( ) [override]
```

destructor

Definition at line 64 of file nutation_j2000.cc.

References `D_coeffs`, `F_coeffs`, `L_coeffs`, `long_coeffs`, `long_t_coeffs`, `M_coeffs`, `obliq_coeffs`, `obliq_t_coeffs`, and `omega_coeffs`.

8.1.2.3 NutationJ2000() [2/2]

```
jeod::NutationJ2000::NutationJ2000 (
    const NutationJ2000 & ) [delete]
```

8.1.3 Member Function Documentation**8.1.3.1** initialize()

```
void jeod::NutationJ2000::initialize (
    PlanetRotationInit * init ) [override], [virtual]
```

Initialize the various coefficients needed for the calculation of nutation.

init must be of type [NutationJ2000Init](#) or a fail message will occur

Parameters

in	<i>init</i>	NutationJ2000Init object with needed coefficients
----	-------------	---

Reimplemented from [jeod::PlanetRotation](#).

Definition at line 173 of file nutation_j2000.cc.

References `D_coeffs`, `F_coeffs`, `jeod::RNPMessages::initialization_error`, `L_coeffs`, `long_coeffs`, `long_t_coeffs`, `M_coeffs`, `num_coeffs`, `obliq_coeffs`, `obliq_t_coeffs`, and `omega_coeffs`.

8.1.3.2 operator=()

```
NutationJ2000& jeod::NutationJ2000::operator= (
    const NutationJ2000 & ) [delete]
```

8.1.3.3 update_rotation()

```
void jeod::NutationJ2000::update_rotation ( ) [override], [virtual]
```

Specific implementation of update_rotation, from the polymorphic pure virtual base class [PlanetRotation](#).

Reimplemented from [jeod::PlanetRotation](#).

Definition at line 81 of file nutation_j2000.cc.

References [jeod::PlanetRotation::current_time](#), [D](#), [D_coeffs](#), [jeod::PlanetRotation::DEGTORAD](#), [epsilon_bar](#), [equa_of_equi](#), [F](#), [F_coeffs](#), [L](#), [L_coeffs](#), [long_coeffs](#), [long_t_coeffs](#), [M](#), [M_coeffs](#), [num_coeffs](#), [nutaton_in_longitude](#), [nutaton_in_obliquity](#), [obliq_coeffs](#), [obliq_t_coeffs](#), [omega](#), [omega_coeffs](#), and [jeod::PlanetRotation::rotation](#).

8.1.4 Friends And Related Function Documentation

8.1.4.1 init_attrjeod__NutationJ2000

```
void init_attrjeod__NutationJ2000 ( ) [friend]
```

8.1.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 92 of file include/nutation_j2000.hh.

8.1.5 Field Documentation

8.1.5.1 D

```
double jeod::NutationJ2000::D {}
```

Last calculated mean elongation from the sun.

trick_units(—)

Definition at line 180 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.2 D_coeffs

```
double* jeod::NutationJ2000::D_coeffs {}
```

The coefficients to calculate mean elongation from the sun.

trick_units(—)

Definition at line 117 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.3 epsilon_bar

```
double jeod::NutationJ2000::epsilon_bar {}
```

Last calculated mean obliquity of the ecliptic.

trick_units(—)

Definition at line 191 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.4 equa_of_equi

```
double jeod::NutationJ2000::equa_of_equi {}
```

Last calculated equations of the equinox.

trick_units(—)

Definition at line 196 of file include/nutation_j2000.hh.

Referenced by jeod::RotationJ2000::update_rotation(), and update_rotation().

8.1.5.5 F

```
double jeod::NutationJ2000::F {}
```

Last calculated mean argument of latitude of the moon.

trick_units(-)

Definition at line 175 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.6 F_coeffs

```
double* jeod::NutationJ2000::F_coeffs {}
```

The coefficients to calculate mean argument of latitude of the moon.

trick_units(-)

Definition at line 112 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.7 L

```
double jeod::NutationJ2000::L {}
```

Last calculated mean anomaly of the moon.

trick_units(-)

Definition at line 165 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.8 L_coeffs

```
double* jeod::NutationJ2000::L_coeffs {}
```

The coefficients to calculate mean anomaly of the moon.

trick_units(-)

Definition at line 102 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.9 long_coeffs

```
double* jeod::NutationJ2000::long_coeffs {}
```

Zero order (in time) coefficients for calculating the nutation in longitude.

trick_units(—)

Definition at line 130 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.10 long_t_coeffs

```
double* jeod::NutationJ2000::long_t_coeffs {}
```

The first order (in time) coefficients for calculating the nutation in longitude.

trick_units(—)

Definition at line 136 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.11 M

```
double jeod::NutationJ2000::M {}
```

Last calculated mean anomaly of the sun.

trick_units(—)

Definition at line 170 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.12 M_coeffs

```
double* jeod::NutationJ2000::M_coeffs {}
```

The coefficients to calculate mean anomaly of the sun.

trick_units(—)

Definition at line 107 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.13 num_coeffs

```
unsigned int jeod::NutationJ2000::num_coeffs {}
```

The number of coefficients in the 9 arrays directly following this declaration.

trick_units(count)

Definition at line 97 of file include/nutation_j2000.hh.

Referenced by initialize(), and update_rotation().

8.1.5.14 nutation_in_longitude

```
double jeod::NutationJ2000::nutation_in_longitude {}
```

The nutation in longitude from the last call of update.

trick_units(-)

Definition at line 154 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.15 nutation_in_obliquity

```
double jeod::NutationJ2000::nutation_in_obliquity {}
```

The nutation in obliquity from the last call of update.

trick_units(-)

Definition at line 160 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.16 obliq_coeffs

```
double* jeod::NutationJ2000::obliq_coeffs {}
```

Zero order coefficients for calculating the nutation in obliquity.

trick_units(-)

Definition at line 142 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.17 obliq_t_coeffs

```
double* jeod::NutationJ2000::obliq_t_coeffs {}
```

First order coefficients for calculating the nutation in obliquity.

trick_units(-)

Definition at line 148 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

8.1.5.18 omega

```
double jeod::NutationJ2000::omega {}
```

Last calculated ascension of the ascending node of the mean lunar orbit.

trick_units(-)

Definition at line 186 of file include/nutation_j2000.hh.

Referenced by update_rotation().

8.1.5.19 omega_coeffs

```
double* jeod::NutationJ2000::omega_coeffs {}
```

The coefficients to calculate the right ascension of the ascending node of the mean mean lunar orbit.

trick_units(-)

Definition at line 124 of file include/nutation_j2000.hh.

Referenced by initialize(), update_rotation(), and ~NutationJ2000().

- *[NutationMars](#) specific implementation of [update_rotation](#), used here to describe nutation effects in longitude and obliquity.*

Data Fields

- double [nutation_in_longitude](#) {}
The latest calculated nutation correction term in longitude.
- double [nutation_in_obliquity](#) {}
The latest calculated nutation correction term in obliquity.
- double [l_at_j2000](#) {}
The (constant) obliquity angle of Mars at the J2000 epoch.
- double [l_dot](#) {}
The (constant) simple secular change in Mars obliquity relative to the Mars mean orbit.
- double [obliquity_angle](#) {}
The latest calculated angle of obliquity, that is, the current orbit inclination angle as measured relative to the Mars mean orbit, measured since the J2000 epoch.
- double [mean_motion](#) {}
The mean motion of Mars, that is, the average orbit arc traversed.
- double [mean_anomaly_j2000](#) {}
The Mars mean anomaly at the J2000 epoch.
- double [q_angle_j2000](#) {}
Parameter q is a slowly varying angle defined in Konopliv 2006 as 2 times w, where w is the argument of perihelion of the Mars orbit relative to the node of the Mars equator and Mars mean orbit.
- double * [l_m_orig](#) {}
The obliquity nutation amplitude parameters.
- double * [psi_m_orig](#) {}
The longitude nutation amplitude parameters.
- double * [int_to_double](#) {}
0 to 9 cast as doubles for use in summation

8.4.5 Field Documentation

8.4.5.1 I_at_j2000

```
double jeod::NutationMars::I_at_j2000 {}
```

The (constant) obliquity angle of Mars at the J2000 epoch.

trick_units(rad)

Definition at line 111 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), and update_rotation().

8.4.5.2 I_dot

```
double jeod::NutationMars::I_dot {}
```

The (constant) simple secular change in Mars obliquity relative to the Mars mean orbit.

trick_units(rad/s)

Definition at line 117 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), and update_rotation().

8.4.5.3 I_m_orig

```
double* jeod::NutationMars::I_m_orig {}
```

The obliquity nutation amplitude parameters.

trick_units(rad)

Definition at line 147 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), update_rotation(), and ~NutationMars().

8.4.5.4 int_to_double

```
double* jeod::NutationMars::int_to_double {}
```

0 to 9 cast as doubles for use in summation

trick_units(-)

Definition at line 157 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), update_rotation(), and ~NutationMars().

8.4.5.5 mean_anomaly_j2000

```
double jeod::NutationMars::mean_anomaly_j2000 {}
```

The Mars mean anomaly at the J2000 epoch.

trick_units(rad)

Definition at line 134 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), and update_rotation().

8.4.5.6 mean_motion

```
double jeod::NutationMars::mean_motion {}
```

The mean motion of Mars, that is, the average orbit arc traversed.

trick_units(rad/s)

Definition at line 129 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), and update_rotation().

8.4.5.7 nutation_in_longitude

```
double jeod::NutationMars::nutation_in_longitude {}
```

The latest calculated nutation correction term in longitude.

trick_units(rad)

Definition at line 101 of file nutation_mars.hh.

Referenced by jeod::RotationMars::update_rotation(), jeod::PrecessionMars::update_rotation(), and update_↔rotation().

8.4.5.8 nutation_in_obliquity

```
double jeod::NutationMars::nutation_in_obliquity {}
```

The latest calculated nutation correction term in obliquity.

trick_units(rad)

Definition at line 106 of file nutation_mars.hh.

Referenced by update_rotation().

8.4.5.9 obliquity_angle

```
double jeod::NutationMars::obliquity_angle {}
```

The latest calculated angle of obliquity, that is, the current orbit inclination angle as measured relative to the Mars mean orbit, measured since the J2000 epoch.

trick_units(rad)

Definition at line 124 of file nutation_mars.hh.

Referenced by jeod::RotationMars::update_rotation(), and update_rotation().

8.4.5.10 psi_m_orig

```
double* jeod::NutationMars::psi_m_orig {}
```

The longitude nutation amplitude parameters.

trick_units(rad)

Definition at line 152 of file nutation_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), update_rotation(), and ~NutationMars().

8.4.5.11 q_angle_j2000

```
double jeod::NutationMars::q_angle_j2000 {}
```

Parameter q is a slowly varying angle defined in Konopliv 2006 as 2 times w , where w is the argument of perihelion of the Mars orbit relative to the node of the Mars equator and Mars mean orbit.

This data member is the value of q at the J2000 epoch.`trick_units(rad)`

Definition at line 142 of file `nutation_mars.hh`.

Referenced by `jeod::RNPMars_rnp_mars_default_data::initialize()`, and `update_rotation()`.

8.5 jeod::PlanetOrientation Class Reference

The generic framework for orientation models to interact with a `DynManager` object.

```
#include <planet_orientation.hh>
```

Inheritance diagram for `jeod::PlanetOrientation`:

Public Member Functions

- `PlanetOrientation()` = default
- `~PlanetOrientation()` override = default
- `PlanetOrientation & operator= (const PlanetOrientation &rhs)` = delete
- `PlanetOrientation (const PlanetOrientation &rhs)` = delete
- virtual void `initialize` (`DynManager &dyn_manager`)
Goes to the dyn manager given and searches for the planet indicated by the user inputted name, in the given dyn manager.
- void `activate` () override
Activates the PlanetOrientation model.
- void `deactivate` () override
Deactivates the PlanetOrientation model.
- void `ephem_initialize` (`EphemeridesManager &manager`) override
Implements the EphemerInterface pure virtual function ephem_initialize.

- void [ephem_activate](#) (EphemeridesManager &manager) override
Mark the model as being activate or inactive.
- void [ephem_build_tree](#) (EphemeridesManager &manager) override
Function, for a particular ephemeris model, nominally builds the particular models portions of the reference frame tree.
- void [set_name](#) (std::string name_in)
Setter for the name.
- std::string [get_name](#) () const override=0
A re-declaration of the pure virtual function in order to convince trick that yes, this is a pure virtual class.

Data Fields

- bool [active](#) {true}
Is the orientation model actively updating? Defaults to true.
- Planet * [planet](#) {}
The planet the attitude model will be working on.
- std::string [name](#) {}
Name of the planet the attitude model will be working on.
- RefFrameRot * [planet_rot_state](#) {}
The current rotational state of the planet.
- double [planet_omega](#) {}
Nominal axial velocity of the earth.
- EphemerisOrientation [orient_interface](#)
The ephemeris interface to the in question orientation.

Friends

- class [InputProcessor](#)
- void [init_attrjeod__PlanetOrientation](#) ()

8.5.1 Detailed Description

The generic framework for orientation models to interact with a DynManager object.

Definition at line 97 of file planet_orientation.hh.

8.5.2 Constructor & Destructor Documentation

8.5.2.1 PlanetOrientation() [1/2]

```
jeod::PlanetOrientation::PlanetOrientation ( ) [default]
```

8.5.2.2 ~PlanetOrientation()

```
jeod::PlanetOrientation::~~PlanetOrientation ( ) [override], [default]
```

8.5.2.3 PlanetOrientation() [2/2]

```
jeod::PlanetOrientation::PlanetOrientation (
    const PlanetOrientation & rhs ) [delete]
```

8.5.3 Member Function Documentation

8.5.3.1 activate()

```
void jeod::PlanetOrientation::activate ( ) [override]
```

Activates the [PlanetOrientation](#) model.

Definition at line 114 of file planet_orientation.cc.

References [active](#).

8.5.3.2 deactivate()

```
void jeod::PlanetOrientation::deactivate ( ) [override]
```

Deactivates the [PlanetOrientation](#) model.

Definition at line 122 of file planet_orientation.cc.

References [active](#).

8.5.3.3 ephemeris_activate()

```
void jeod::PlanetOrientation::ephemeris_activate (
    EphemeridesManager & manager ) [override]
```

Mark the model as being activate or inactive.

Parameters

<code>in, out</code>	<i>manager</i>	ephemerides manager
----------------------	----------------	---------------------

Definition at line 144 of file planet_orientation.cc.

8.5.3.4 ephemerides_build_tree()

```
void jeod::PlanetOrientation::ephemerides_build_tree (
    EphemeridesManager & manager ) [override]
```

Function, for a particular ephemeris model, nominally builds the particular models portions of the reference frame tree.

This implementation, by default, does nothing

Parameters

<code>in, out</code>	<i>manager</i>	ephemerides manager
----------------------	----------------	---------------------

Definition at line 156 of file planet_orientation.cc.

8.5.3.5 ephemerides_initialize()

```
void jeod::PlanetOrientation::ephemerides_initialize (
    EphemeridesManager & manager ) [override]
```

Implements the EphemerisInterface pure virtual function ephemerides_initialize.

Note that the stand alone "initialize" function MUST be called before this function. Normal operating procedure is the DynamicsManager calls this function, not the user.

Parameters

<code>in, out</code>	<i>manager</i>	ephemerides manager
----------------------	----------------	---------------------

Definition at line 135 of file planet_orientation.cc.

8.5.3.6 get_name()

```
std::string jeod::PlanetOrientation::get_name ( ) const [override], [pure virtual]
```

A re-declaration of the pure virtual function in order to convince trick that yes, this is a pure virtual class.

Returns

Planet name.

Implemented in [jeod::PlanetRNP](#), [jeod::RNPMars](#), and [jeod::RNPJ2000](#).

8.5.3.7 initialize()

```
void jeod::PlanetOrientation::initialize (
    DynManager & dyn_manager ) [virtual]
```

Goes to the dyn manager given and searches for the planet indicated by the user inputted name, in the given dyn manager.

Will send a fail message if the named planet is not found. Additionally, this will register this ephemeris interface with the given DynManager, and will set up the contained EphemerisOrientation to control the named planet.

Parameters

<i>in, out</i>	<i>dyn_manager</i>	DynManager where the attitude will be applied
----------------	--------------------	---

Reimplemented in [jeod::RNPMars](#), and [jeod::RNPJ2000](#).

Definition at line 65 of file planet_orientation.cc.

References [jeod::RNPMessages::initialization_error](#), [name](#), [orient_interface](#), [planet](#), [planet_omega](#), and [planet_rot_state](#).

Referenced by [jeod::RNPJ2000::initialize\(\)](#), and [jeod::RNPMars::initialize\(\)](#).

8.5.3.8 operator=()

```
PlanetOrientation& jeod::PlanetOrientation::operator= (
    const PlanetOrientation & rhs ) [delete]
```

8.5.3.9 set_name()

```
void jeod::PlanetOrientation::set_name (
    std::string name_in ) [inline]
```

Setter for the name.

Definition at line 167 of file planet_orientation.hh.

8.5.4 Friends And Related Function Documentation

8.5.4.1 init_attrjeod__PlanetOrientation

```
void init_attrjeod__PlanetOrientation ( ) [friend]
```

8.5.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 100 of file planet_orientation.hh.

8.5.5 Field Documentation

8.5.5.1 active

```
bool jeod::PlanetOrientation::active {true}
```

Is the orientation model actively updating? Defaults to true.

trick_units(−)

Definition at line 118 of file planet_orientation.hh.

Referenced by activate(), deactivate(), jeod::RNPJ2000::ephem_update(), jeod::RNPMars::ephem_update(), jeod::RNPJ2000::update_axial_rotation(), jeod::RNPMars::update_axial_rotation(), jeod::RNPJ2000::update_↔rnp(), and jeod::RNPMars::update_rnp().

8.5.5.2 name

```
std::string jeod::PlanetOrientation::name {""}
```

Name of the planet the attitude model will be working on.

Planet must be found in the DynManager sent in at initializationtrick_units(−)

Definition at line 129 of file planet_orientation.hh.

Referenced by jeod::RNPJ2000_rnp_j2000_default_data::initialize(), jeod::RNPMars_rnp_mars_default_data↔::initialize(), and initialize().

8.5.5.3 orient_interface

EphemerisOrientation jeod::PlanetOrientation::orient_interface

The ephemeris interface to the in question orientation.

trick_units(—)

Definition at line 162 of file planet_orientation.hh.

Referenced by jeod::RNPJ2000::ephem_update(), jeod::RNPMars::ephem_update(), and initialize().

8.5.5.4 planet

Planet* jeod::PlanetOrientation::planet {}

The planet the attitude model will be working on.

trick_units(—)

Definition at line 123 of file planet_orientation.hh.

Referenced by initialize(), jeod::RNPJ2000::update_axial_rotation(), jeod::RNPMars::update_axial_rotation(), jeod::RNPJ2000::update_rnp(), and jeod::RNPMars::update_rnp().

8.5.5.5 planet_omega

double jeod::PlanetOrientation::planet_omega {}

Nominal axial velocity of the earth.

trick_units(rad/s)

Definition at line 139 of file planet_orientation.hh.

Referenced by jeod::RNPJ2000_rnp_j2000_default_data::initialize(), jeod::RNPMars_rnp_mars_default_data::initialize(), initialize(), jeod::RNPJ2000::initialize(), jeod::RNPMars::initialize(), and jeod::PlanetRNP::propagate_rnp().

8.5.5.6 planet_rot_state

RefFrameRot* jeod::PlanetOrientation::planet_rot_state {}

The current rotational state of the planet.

trick_units(—)

Definition at line 134 of file planet_orientation.hh.

Referenced by initialize(), and jeod::PlanetRNP::propagate_rnp().

8.6 jeod::PlanetRNP Class Reference

The generic framework for orientation models based on the RNP paradigm.

```
#include <planet_rnp.hh>
```

Inheritance diagram for jeod::PlanetRNP:

Public Types

- enum [RNPFidelity](#) { [FullRNP](#) = 0, [RotationOnly](#) = 1, [ConstantNP](#) = 2 }
Specifies the initialization fidelity of the RNP model.

Public Member Functions

- [PlanetRNP](#) ()=default
- [~PlanetRNP](#) () override=default
- [PlanetRNP](#) & [operator=](#) (const [PlanetRNP](#) &rhs)=delete
- [PlanetRNP](#) (const [PlanetRNP](#) &rhs)=delete
- void [update_rnp](#) ()
Invokes the calculation for all rotation models contained in the RNP, used on the last time set in each model through [PlanetRotation::set_time](#).
- void [update_axial_rotation](#) ()
Same as [update_rnp](#), but only the [axial_rotation](#) will be updated.
- void [propagate_rnp](#) ()
Multiplies out the (up to) four planet rotation models (nutation, precession, polar motion and rotation), leaving out models whose pointers are NULL, and feeds it to the planet attitude found in the dyn manager given in [initialize](#).
- std::string [get_name](#) () const override=0
A re-declaration of the pure virtual function in order to convince trick that yes, this is a pure virtual class.

Data Fields

- [PlanetRotation](#) * [nutation](#) {}
Pointer to the nutation model.
- [PlanetRotation](#) * [precession](#) {}
Pointer to the precession model.
- [PlanetRotation](#) * [polar_motion](#) {}
Pointer to the polar_motion model.
- [PlanetRotation](#) * [rotation](#) {}
Pointer to the rotation model.
- [RNPFidelity](#) [rnp_type](#) {[FullRNP](#)}
- The fidelity of the RNP model.
- bool [enable_polar](#) {true}
Gives the option of turning on or off polar motion.
- double [NP_matrix](#) [3][3] {[IDENTITY_3X3](#)}
- Rotation Matrix representing: $\text{transpose}(\text{nutation} \rightarrow \text{rotation}) * \text{transpose}(\text{precession} \rightarrow \text{rotation})$

Protected Attributes

- double `scratch_matrix` [3][3] {}
A transformation matrix used for intermediate math steps.

Friends

- class `InputProcessor`
- void `init_attrjeod__PlanetRNP` ()

8.6.1 Detailed Description

The generic framework for orientation models based on the RNP paradigm.

Definition at line 107 of file `planet_rnp.hh`.

8.6.2 Member Enumeration Documentation

8.6.2.1 RNPFidelity

```
enum jeod::PlanetRNP::RNPFidelity
```

Specifies the initialization fidelity of the RNP model.

Enumerator

FullRNP	Full fidelity RNP matrix. Formerly Full_Term_RNP.
RotationOnly	Identity NP matrix, then rotation calculates linearly.
ConstantNP	Once calculated NP matrix (at the start), then rotation.

Definition at line 115 of file `planet_rnp.hh`.

8.6.3 Constructor & Destructor Documentation

8.6.3.1 PlanetRNP() [1/2]

```
jeod::PlanetRNP::PlanetRNP ( ) [default]
```

8.6.3.2 ~PlanetRNP()

```
jeod::PlanetRNP::~~PlanetRNP ( ) [override], [default]
```

8.6.3.3 PlanetRNP() [2/2]

```
jeod::PlanetRNP::PlanetRNP (
    const PlanetRNP & rhs ) [delete]
```

8.6.4 Member Function Documentation

8.6.4.1 get_name()

```
std::string jeod::PlanetRNP::get_name ( ) const [override], [pure virtual]
```

A re-declaration of the pure virtual function in order to convince trick that yes, this is a pure virtual class.

Returns

Planet name.

Implements [jeod::PlanetOrientation](#).

Implemented in [jeod::RNPMars](#), and [jeod::RNPJ2000](#).

8.6.4.2 operator=()

```
PlanetRNP& jeod::PlanetRNP::operator= (
    const PlanetRNP & rhs ) [delete]
```

8.6.4.3 propagate_rnp()

```
void jeod::PlanetRNP::propagate_rnp ( )
```

Multiples out the (up to) four planet rotation models (nutation, precession, polar motion and rotation), leaving out models whose pointers are NULL, and feeds it to the planet attitude found in the dyn manager given in initialize.

Definition at line 176 of file planet_rnp.cc.

References [ConstantNP](#), [enable_polar](#), [jeod::RNPMessages::fidelity_error](#), [FullRNP](#), [NP_matrix](#), [jeod::PlanetOrientation::planet_omega](#), [jeod::PlanetOrientation::planet_rot_state](#), [polar_motion](#), [rnp_type](#), [jeod::PlanetRotation::rotation](#), [rotation](#), [RotationOnly](#), [scratch_matrix](#), and [jeod::RNPMessages::setup_error](#).

Referenced by [update_axial_rotation\(\)](#), and [update_rnp\(\)](#).

8.6.4.4 update_axial_rotation()

```
void jeod::PlanetRNP::update_axial_rotation ( )
```

Same as update_rnp, but only the axial_rotation will be updated.

Definition at line 151 of file planet_rnp.cc.

References propagate_rnp(), rotation, jeod::RNPMessages::setup_error, and jeod::PlanetRotation::update_↵ rotation().

Referenced by jeod::RNPJ2000::ephem_update(), jeod::RNPMars::ephem_update(), jeod::RNPJ2000::update_↵ axial_rotation(), and jeod::RNPMars::update_axial_rotation().

8.6.4.5 update_rnp()

```
void jeod::PlanetRNP::update_rnp ( )
```

Invokes the calculation for all rotation models contained in the RNP, used on the last time set in each model through PlanetRotation::set_time.

Then multiplies out and updates the attitude of the planet found during initialization.

Definition at line 75 of file planet_rnp.cc.

References enable_polar, jeod::RNPMessages::fidelity_error, FullRNP, NP_matrix, nutation, polar_motion, precession, propagate_rnp(), rnp_type, jeod::PlanetRotation::rotation, rotation, jeod::RNPMessages::setup_error, and jeod::PlanetRotation::update_rotation().

Referenced by jeod::RNPJ2000::update_rnp(), and jeod::RNPMars::update_rnp().

8.6.5 Friends And Related Function Documentation

8.6.5.1 init_attrjeod__PlanetRNP

```
void init_attrjeod__PlanetRNP ( ) [friend]
```

8.6.5.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 109 of file planet_rnp.hh.

8.6.6 Field Documentation

8.6.6.1 enable_polar

```
bool jeod::PlanetRNP::enable_polar {true}
```

Gives the option of turning on or off polar motion.

trick_units(—)

Definition at line 157 of file planet_rnp.hh.

Referenced by jeod::RNPJ2000_rnp_j2000_default_data::initialize(), jeod::RNPMars_rnp_mars_default_data::initialize(), propagate_rnp(), jeod::RNPMars::RNPMars(), jeod::RNPJ2000::update_rnp(), and update_rnp().

8.6.6.2 NP_matrix

```
double jeod::PlanetRNP::NP_matrix[3][3] {IDENTITY_3X3}
```

Rotation Matrix representing: transpose(nutation->rotation) * transpose(precession->rotation)

trick_units(—)

Definition at line 163 of file planet_rnp.hh.

Referenced by propagate_rnp(), and update_rnp().

8.6.6.3 nutation

```
PlanetRotation* jeod::PlanetRNP::nutation {}
```

Pointer to the nutation model.

trick_units(—)

Definition at line 132 of file planet_rnp.hh.

Referenced by jeod::RNPJ2000::RNPJ2000(), jeod::RNPMars::RNPMars(), jeod::RNPJ2000::update_rnp(), update_rnp(), and jeod::RNPMars::update_rnp().

8.6.6.4 polar_motion

```
PlanetRotation* jeod::PlanetRNP::polar_motion {}
```

Pointer to the polar_motion model.

trick_units(—)

Definition at line 142 of file planet_rnp.hh.

Referenced by propagate_rnp(), jeod::RNPJ2000::RNPJ2000(), jeod::RNPMars::RNPMars(), jeod::RNPJ2000::update_rnp(), and update_rnp().

8.6.6.5 precession

```
PlanetRotation* jeod::PlanetRNP::precession {}
```

Pointer to the precession model.

trick_units(—)

Definition at line 137 of file planet_rnp.hh.

Referenced by jeod::RNPJ2000::RNPJ2000(), jeod::RNPMars::RNPMars(), jeod::RNPJ2000::update_rnp(), update_rnp(), and jeod::RNPMars::update_rnp().

8.6.6.6 rnp_type

```
RNPFidelity jeod::PlanetRNP::rnp_type {FullRNP}
```

The fidelity of the RNP model.

trick_units(—)

Definition at line 152 of file planet_rnp.hh.

Referenced by jeod::RNPJ2000_rnp_j2000_default_data::initialize(), jeod::RNPMars_rnp_mars_default_data::initialize(), jeod::RNPJ2000::initialize(), jeod::RNPMars::initialize(), propagate_rnp(), jeod::RNPJ2000::update_axial_rotation(), jeod::RNPMars::update_axial_rotation(), jeod::RNPJ2000::update_rnp(), update_rnp(), and jeod::RNPMars::update_rnp().

8.6.6.7 rotation

```
PlanetRotation* jeod::PlanetRNP::rotation {}
```

Pointer to the rotation model.

trick_units(-)

Definition at line 147 of file planet_rnp.hh.

Referenced by propagate_rnp(), jeod::RNPJ2000::RNPJ2000(), jeod::RNPMars::RNPMars(), jeod::RNPJ2000::update_axial_rotation(), jeod::RNPMars::update_axial_rotation(), update_axial_rotation(), jeod::RNPJ2000::update_rnp(), update_rnp(), and jeod::RNPMars::update_rnp().

8.6.6.8 scratch_matrix

```
double jeod::PlanetRNP::scratch_matrix[3][3] {} [protected]
```

A transformation matrix used for intermediate math steps.

trick_units(-)

Definition at line 169 of file planet_rnp.hh.

Referenced by propagate_rnp().

8.7 jeod::PlanetRotation Class Reference

The generic base class for all planet transformations.

```
#include <planet_rotation.hh>
```

Inheritance diagram for jeod::PlanetRotation:

Public Member Functions

- [PlanetRotation](#) ()=default
- virtual [~PlanetRotation](#) ()=default
- [PlanetRotation](#) & [operator=](#) (const [PlanetRotation](#) &)=delete
- [PlanetRotation](#) (const [PlanetRotation](#) &)=delete
- virtual void [update_rotation](#) ()
Updates the rotation of this particular object, based on the last time set in "set_time".
- virtual void [initialize](#) ([PlanetRotationInit](#) *init)
Initializes the invoking object from an initialization object.
- virtual void [update_time](#) (double time)
Update the time that the next update_rotation call will use.
- void [get_rotation](#) (double rot[3][3])
Copy the last calculated rotation to 'rot'.
- void [get_rotation_transpose](#) (double rot[3][3])
Same as get_rotation, but returns the transpose.

Data Fields

- double [rotation](#) [3][3] {IDENTITY_3X3}
The transformation matrix outputted by the model after update is called.
- double [current_time](#) {}
The current time the transformation matrix will be calculated from.

Protected Attributes

- double [RADTODEG](#) {180.0 / M_PI}
Convert from radians to degrees.
- double [DEGTORAD](#) {M_PI / 180.0}
Inverse of RADTODEG.
- double [DEGTOSEC](#) {60.0 * 60.0}
Convert from degrees to arcseconds.
- double [SECTODEG](#) {1.0 / (60.0 * 60.0)}
Inverse of DEGTOSEC.
- double [JULIANDAYTOSEC](#) {86400.0}
Convert from julian day to seconds.
- double [SECTOJULIANDAY](#) {1.0 / 86400.0}
Inverse of JULIANDAYTOSEC.
- double [JULIANCENTTODAY](#) {36525.0}
Convert from julian centuries to julian days.
- double [DAYTOJULIANCENT](#) {1.0 / 36525.0}
Inverse of JULIANCENTTODAY.

8.7.1 Detailed Description

The generic base class for all planet transformations.

Definition at line 94 of file planet_rotation.hh.

8.7.2 Constructor & Destructor Documentation

8.7.2.1 PlanetRotation() [1/2]

```
jeod::PlanetRotation::PlanetRotation ( ) [default]
```

8.7.2.2 ~PlanetRotation()

```
virtual jeod::PlanetRotation::~~PlanetRotation ( ) [virtual], [default]
```

8.7.2.3 PlanetRotation() [2/2]

```
jeod::PlanetRotation::PlanetRotation (
    const PlanetRotation & ) [delete]
```

8.7.3 Member Function Documentation

8.7.3.1 get_rotation()

```
void jeod::PlanetRotation::get_rotation (
    double rot[3][3] )
```

Copy the last calculated rotation to 'rot'.

Parameters

out	rot	Where the rotation matrix will be stored
-----	-----	--

Definition at line 59 of file planet_rotation.cc.

References rotation.

8.7.3.2 get_rotation_transpose()

```
void jeod::PlanetRotation::get_rotation_transpose (
    double rot[3][3] )
```

Same as `get_rotation`, but returns the transpose.

Parameters

out	rot	Where the transpose matrix will be stored
-----	-----	---

Definition at line 68 of file `planet_rotation.cc`.

References `rotation`.

8.7.3.3 initialize()

```
virtual void jeod::PlanetRotation::initialize (
    PlanetRotationInit * init ) [inline], [virtual]
```

Initializes the invoking object from an initialization object.

Parameters

in	init	The object that will initialize the invoking object.
----	------	--

Reimplemented in [jeod::NutationJ2000](#), and [jeod::PolarMotionJ2000](#).

Definition at line 195 of file `planet_rotation.hh`.

8.7.3.4 operator=()

```
PlanetRotation& jeod::PlanetRotation::operator= (
    const PlanetRotation & ) [delete]
```

8.7.3.5 update_rotation()

```
virtual void jeod::PlanetRotation::update_rotation ( ) [inline], [virtual]
```

Updates the rotation of this particular object, based on the last time set in "set_time".

Reimplemented in [jeod::NutationJ2000](#), [jeod::NutationMars](#), [jeod::PrecessionMars](#), [jeod::RotationMars](#), [jeod::PolarMotionJ2000](#), [jeod::RotationJ2000](#), and [jeod::PrecessionJ2000](#).

Definition at line 171 of file planet_rotation.hh.

Referenced by [jeod::PlanetRNP::update_axial_rotation\(\)](#), and [jeod::PlanetRNP::update_rnp\(\)](#).

8.7.3.6 update_time()

```
void jeod::PlanetRotation::update_time (
    double time ) [virtual]
```

Update the time that the next update_rotation call will use.

Parameters

in	time	Time. units and UTC/UT1/TAI etc are determined by the individual PlanetRotation model
----	------	---

Definition at line 50 of file planet_rotation.cc.

References [current_time](#).

Referenced by [jeod::RNPJ2000::update_axial_rotation\(\)](#), [jeod::RNPMars::update_axial_rotation\(\)](#), [jeod::RNPJ2000::update_rnp\(\)](#), and [jeod::RNPMars::update_rnp\(\)](#).

8.7.4 Friends And Related Function Documentation

8.7.4.1 init_attrjeod__PlanetRotation

```
void init_attrjeod__PlanetRotation ( ) [friend]
```

8.7.4.2 InputProcessor

```
friend class InputProcessor [friend]
```

Definition at line 96 of file planet_rotation.hh.

8.7.5 Field Documentation

8.7.5.1 current_time

```
double jeod::PlanetRotation::current_time {}
```

The current time the transformation matrix will be calculated from.

Unitless so that models with different time scales can be used with one underlying model `trick_units(-)`

Definition at line 109 of file `planet_rotation.hh`.

Referenced by `jeod::PrecessionJ2000::update_rotation()`, `jeod::RotationJ2000::update_rotation()`, `jeod::PolarMotionJ2000::update_rotation()`, `jeod::RotationMars::update_rotation()`, `jeod::PrecessionMars::update_rotation()`, `jeod::NutationMars::update_rotation()`, `jeod::NutationJ2000::update_rotation()`, and `update_time()`.

8.7.5.2 DAYTOJULIANCENT

```
double jeod::PlanetRotation::DAYTOJULIANCENT {1.0 / 36525.0} [protected]
```

Inverse of `JULIANCENTTODAY`.

`trick_units(-)`

Definition at line 153 of file `planet_rotation.hh`.

8.7.5.3 DEGTORAD

```
double jeod::PlanetRotation::DEGTORAD {M_PI / 180.0} [protected]
```

Inverse of `RADTODEG`.

`trick_units(rad/degree)`

Definition at line 123 of file `planet_rotation.hh`.

Referenced by `jeod::PrecessionJ2000::update_rotation()`, `jeod::RotationJ2000::update_rotation()`, and `jeod::NutationJ2000::update_rotation()`.

8.7.5.4 DEGTOSEC

```
double jeod::PlanetRotation::DEGTOSEC {60.0 * 60.0} [protected]
```

Convert from degrees to arcseconds.

trick_units(arcsecond/degree)

Definition at line 128 of file planet_rotation.hh.

Referenced by jeod::PrecessionJ2000::update_rotation().

8.7.5.5 JULIANCENTTODAY

```
double jeod::PlanetRotation::JULIANCENTTODAY {36525.0} [protected]
```

Convert from julian centuries to julian days.

trick_units(—)

Definition at line 148 of file planet_rotation.hh.

8.7.5.6 JULIANDAYTOSEC

```
double jeod::PlanetRotation::JULIANDAYTOSEC {86400.0} [protected]
```

Convert from julian day to seconds.

trick_units(s/day)

Definition at line 138 of file planet_rotation.hh.

8.7.5.7 RADTODEG

```
double jeod::PlanetRotation::RADTODEG {180.0 / M_PI} [protected]
```

Convert from radians to degrees.

trick_units(degree/rad)

Definition at line 118 of file planet_rotation.hh.

8.7.5.8 rotation

```
double jeod::PlanetRotation::rotation[3][3] {IDENTITY_3X3}
```

The transformation matrix outputted by the model after update is called.

```
trick_units(-)
```

Definition at line 101 of file planet_rotation.hh.

Referenced by `get_rotation()`, `get_rotation_transpose()`, `jeod::PlanetRNP::propagate_rnp()`, `jeod::PlanetRNP::update_rnp()`, `jeod::PrecessionJ2000::update_rotation()`, `jeod::RotationJ2000::update_rotation()`, `jeod::PolarMotionJ2000::update_rotation()`, `jeod::RotationMars::update_rotation()`, `jeod::PrecessionMars::update_rotation()`, `jeod::NutationMars::update_rotation()`, and `jeod::NutationJ2000::update_rotation()`.

8.7.5.9 SECTODEG

```
double jeod::PlanetRotation::SECTODEG {1.0 / (60.0 * 60.0)} [protected]
```

Inverse of DEGTOSEC.

```
trick_units(degree/arcsecond)
```

Definition at line 133 of file planet_rotation.hh.

8.7.5.10 SECTOJULIANDAY

```
double jeod::PlanetRotation::SECTOJULIANDAY {1.0 / 86400.0} [protected]
```

Inverse of JULIANDAYTOSEC.

```
trick_units(day/s)
```

Definition at line 143 of file planet_rotation.hh.

```

8.9.3 Member Function Documentation

8.9.3.1 initialize()

```
void jeod::PolarMotionJ2000::initialize (
    PlanetRotationInit * init ) [override], [virtual]
```

Initialize the coefficients of [PolarMotionJ2000](#).

init must be of type [PolarMotionJ2000Init](#) or a fail message will occur.

Parameters

in	init	PolarMotionJ2000Init with needed coefficients
----	------	---

Reimplemented from [jeod::PlanetRotation](#).

Definition at line 175 of file polar_motion_j2000.cc.

References [jeod::RNPMessages::initialization_error](#), [last_table_index](#), [override_table](#), [polar_mjd](#), [xp](#), [xp_tbl](#), [yp](#), and [yp_tbl](#).

8.9.3.2 operator=()

```
PolarMotionJ2000& jeod::PolarMotionJ2000::operator= (
    const PolarMotionJ2000 & ) [delete]
```

8.9.3.3 update_rotation()

```
void jeod::PolarMotionJ2000::update_rotation ( ) [override], [virtual]
```

[PolarMotionJ2000](#) specific implementaiton of update_rotation from [PlanetRotation](#).

Reimplemented from [jeod::PlanetRotation](#).

Definition at line 72 of file polar_motion_j2000.cc.

References [jeod::PlanetRotation::current_time](#), [last_table_index](#), [override_table](#), [polar_mjd](#), [jeod::RNPMessages](#), [jeod::polar_motion_table_warning](#), [jeod::PlanetRotation::rotation](#), [warn_table](#), [xp](#), [xp_tbl](#), [yp](#), and [yp_tbl](#).

8.14.5 Field Documentation

8.14.5.1 J

```
double jeod::PrecessionMars::J {}
```

The (constant) inclination of the Mars mean orbit relative to the ICRF x-y plane.

trick_units(rad)

Definition at line 133 of file precession_mars.hh.

Referenced by [compute_fixed_matrices\(\)](#), and [jeod::RNPMars_rnp_mars_default_data::initialize\(\)](#).

8.14.5.2 N

```
double jeod::PrecessionMars::N {}
```

The (constant) angle from the J2000 vernal equinox to the node of the Mars mean orbit and ICRF x-y plane.

trick_units(rad)

Definition at line 127 of file precession_mars.hh.

Referenced by compute_fixed_matrices(), and jeod::RNPMars_rnp_mars_default_data::initialize().

8.14.5.3 NJ_matrix

```
double jeod::PrecessionMars::NJ_matrix[3][3] {} [private]
```

The (constant) rotation matrix calculated from N and J.

trick_units(-)

Definition at line 140 of file precession_mars.hh.

Referenced by compute_fixed_matrices(), and update_rotation().

8.14.5.4 nutation

```
NutationMars* jeod::PrecessionMars::nutation {}
```

Pointer to the Mars nutation object, used to access nutation in longitude information.

Will be NULL (automatically) if anything but Full_Term_RNP is set in the [RNPMars](#) object.trick_units(-)

Definition at line 105 of file precession_mars.hh.

Referenced by jeod::RNPMars::initialize(), and update_rotation().

8.14.5.5 psi_at_j2000

```
double jeod::PrecessionMars::psi_at_j2000 {}
```

The (constant) precession angle of Mars at the J2000 epoch.

trick_units(rad)

Definition at line 110 of file precession_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), and update_rotation().

8.14.5.6 psi_dot

```
double jeod::PrecessionMars::psi_dot {}
```

The (constant) simple precession rate of Mars.

trick_units(rad/s)

Definition at line 115 of file precession_mars.hh.

Referenced by jeod::RNPMars_rnp_mars_default_data::initialize(), and update_rotation().

8.14.5.7 psi_precess

```
double jeod::PrecessionMars::psi_precess {}
```

The most recent calculated value of the precession angle for Mars, measured since J2000 epoch.

trick_units(rad)

Definition at line 121 of file precession_mars.hh.

Referenced by update_rotation().

The documentation for this class was generated from the following files:

8.15 jeod::RNPJ2000 Class Reference

Implements the J2000 RNP model using the generic RNP framework.

```
#include <rnp_j2000.hh>
```

Inheritance diagram for jeod::RNPJ2000:

Public Member Functions

- [RNPJ2000](#) ()
default constructor.
- [~RNPJ2000](#) () override=default
- [RNPJ2000](#) & [operator=](#) (const [RNPJ2000](#) &)=delete
- [RNPJ2000](#) (const [RNPJ2000](#) &)=delete
- void [initialize](#) (DynManager &manager) override
Apply the various options, including fidelity of RNP and if polar motion is enabled or not, then call the base class initializer.
- void [update_rnp](#) (const TimeTT &time_tt, TimeGMST &time_gmst, const TimeUT1 &time_ut1)
Updates the complete RNP and supplies it to the Dynamics Manager.
- void [update_axial_rotation](#) (TimeGMST &time_gmst)
Updates the axial rotation portion of RNP and supplies the entire RNP to the Dynamics Manager.
- double [timestamp](#) () const override
- std::string [get_name](#) () const override
A re-declaration of the pure virtual function in order to convince trick that yes, this is a pure virtual class.
- void [ephem_update](#) () override

Data Fields

- [RotationJ2000 RJ2000](#)
Earth J2000 rotation model.
- [NutationJ2000 NJ2000](#)
Earth J2000 nutation model.
- [PrecessionJ2000 PJ2000](#)
Earth J2000 precession model.
- [PolarMotionJ2000 PMJ2000](#)
Earth J2000 polar motion model.
- std::string [internal_name](#) {"RNPJ2000"}
The hard coded internal name to be returned on calling the overridden EphemerisInterface function "get_name".

Private Member Functions

- void [get_dyn_time_ptr](#) (TimeGMST &gmst)

Private Attributes

- TimeGMST * [gmst_ptr](#) {}
Pointer to the TimeGMST used to update this object when [ephem_update](#) is invoked.
- TimeDyn * [time_dyn_ptr](#) {}
Pointer to the TimeDyn object, used to time stamp the reference frame when it is being updated.
- double [last_updated_time_full](#) {}
The last update time, when updated through [update_rnp](#), for the RNP, referencing TimeDyn.seconds .
- bool [never_updated_full](#) {true}
Indicates that [last_updated_time_full](#) has never been populated, and that the update must be done regardless of given time.
- double [last_updated_time_rotational](#) {}
The last update time, when updated through [update_axial_rotation](#), referencing TimeDyn.seconds .
- bool [never_updated_rotational](#) {true}
Indicates that [last_updated_time_rotational](#) has never been populated, and that the update must be done regardless of given time.

8.15.3.2 get_dyn_time_ptr()

```
void jeod::RNPJ2000::get_dyn_time_ptr (
    TimeGMST & gmst ) [private]
```

Definition at line 326 of file rnp_j2000.cc.

References [jeod::RNPMessages::setup_error](#), and [time_dyn_ptr](#).

Referenced by [update_axial_rotation\(\)](#), and [update_rnp\(\)](#).

8.15.3.3 get_name()

```
std::string jeod::RNPJ2000::get_name ( ) const [override], [virtual]
```

A re-declaration of the pure virtual function in order to convince trick that yes, this is a pure virtual class.

Returns

Planet name.

Implements [jeod::PlanetRNP](#).

Definition at line 289 of file rnp_j2000.cc.

References [internal_name](#).

8.15.3.4 initialize()

```
void jeod::RNPJ2000::initialize (
    DynManager & dyn_manager ) [override], [virtual]
```

Apply the various options, including fidelity of RNP and if polar motion is enabled or not, then call the base class initializer.

Note that this function will still run even if the active flag is set to false. Additionally, note that this function does not update the rotation matrix between inertial and planet fixed. It only sets up the object to work with the DynManager. [update_rnp](#) must be called to update the RNP matrix. This function will also cache of TimeGMST from the given TimeManager

Parameters

in, out	<i>dyn_manager</i>	DynManager where the planet attitude to be updated is contained
---------	--------------------	---

Reimplemented from [jeod::PlanetOrientation](#).

Definition at line 95 of file rnp_j2000.cc.

References [jeod::PlanetRNP::ConstantNP](#), [jeod::PlanetRNP::FullRNP](#), [jeod::PlanetOrientation::initialize\(\)](#), [NJ2000](#), [jeod::RotationJ2000::nutation](#), [jeod::PlanetOrientation::planet_omega](#), [jeod::RotationJ2000::planet_rotational_↵](#) velocity, [RJ2000](#), [jeod::PlanetRNP::rnp_type](#), [jeod::PlanetRNP::RotationOnly](#), and [jeod::RotationJ2000::use_full↵](#) _rnp.

8.15.3.5 operator=()

```
RNPJ2000& jeod::RNPJ2000::operator= (
    const RNPJ2000 & ) [delete]
```

8.15.3.6 timestamp()

```
double jeod::RNPJ2000::timestamp ( ) const [override]
```

Definition at line 284 of file rnp_j2000.cc.

References [last_updated_time_rotational](#).

8.15.3.7 update_axial_rotation()

```
void jeod::RNPJ2000::update_axial_rotation (
    TimeGMST & time_gmst )
```

Updates the axial rotation portion of RNP and supplies the entire RNP to the Dynamics Manager.

Parameters

in	<i>time_gmst</i>	current time in the GMST time standard Units: The
----	------------------	--

Definition at line 231 of file rnp_j2000.cc.

8.17.1 Detailed Description

Implements the "Pathfinder" Mars RNP model using the generic RNP framework.

Definition at line 101 of file `include/rnp_mars.hh`.

8.17.2 Constructor & Destructor Documentation

8.17.2.1 `RNPMars()` [1/2]

```
jeod::RNPMars::RNPMars ( )
```

Default constructor.

Definition at line 68 of file `rnp_mars.cc`.

References `jeod::PlanetRNP::enable_polar`, `NMars`, `jeod::PlanetRNP::nututation`, `PMars`, `jeod::PlanetRNP::polar_↔motion`, `jeod::PlanetRNP::precession`, `RMars`, and `jeod::PlanetRNP::rotation`.

8.17.2.2 `~RNPMars()`

```
jeod::RNPMars::~~RNPMars ( ) [override], [default]
```

8.17.2.3 `RNPMars()` [2/2]

```
jeod::RNPMars::RNPMars (
    const RNPMars & ) [delete]
```

8.17.3 Member Function Documentation

8.17.3.1 ephem_update()

```
void jeod::RNPMars::ephem_update ( ) [override]
```

Define 'alias' to call axial update function, for polymorphism.

Definition at line 251 of file rnp_mars.cc.

References [jeod::PlanetOrientation::active](#), [jeod::PlanetOrientation::orient_interface](#), [jeod::RNPMessages::setup_error](#), [tt_ptr](#), and [jeod::PlanetRNP::update_axial_rotation\(\)](#).

8.17.3.2 get_dyn_time_ptr()

```
void jeod::RNPMars::get_dyn_time_ptr (
    TimeTT & time_tt ) [private]
```

Get simulation time via a two-step pointer trail.

Parameters

in	time_tt	Current TT time
----	-------------------------	-----------------

Definition at line 275 of file rnp_mars.cc.

References [jeod::RNPMessages::setup_error](#), and [time_dyn_ptr](#).

Referenced by [update_axial_rotation\(\)](#), and [update_rnp\(\)](#).

8.17.3.3 get_name()

```
std::string jeod::RNPMars::get_name ( ) const [override], [virtual]
```

Return the internal name of the object.

Implements [jeod::PlanetRNP](#).

Definition at line 243 of file rnp_mars.cc.

References [internal_name](#).

8.17.3.4 initialize()

```
void jeod::RNPMars::initialize (
    DynManager & dyn_manager ) [override], [virtual]
```

Perform setup of the object, then call the base class initializer.

Parameters

in, out	<i>dyn_manager</i>	Ref to dynamics manager
---------	--------------------	-------------------------

Reimplemented from [jeod::PlanetOrientation](#).

Definition at line 87 of file rnp_mars.cc.

References [jeod::PrecessionMars::compute_fixed_matrices\(\)](#), [jeod::PlanetRNP::ConstantNP](#), [jeod::PlanetRNP::FullRNP](#), [jeod::PlanetOrientation::initialize\(\)](#), [NMars](#), [jeod::PrecessionMars::nutation](#), [jeod::RotationMars::nutation](#), [jeod::PlanetOrientation::planet_omega](#), [jeod::RotationMars::planet_rotational_velocity](#), [PMars](#), [RMars](#), [jeod::PlanetRNP::rnp_type](#), [jeod::PlanetRNP::RotationOnly](#), and [jeod::RotationMars::use_full_rnp](#).

8.17.3.5 operator=()

```
RNPMars& jeod::RNPMars::operator= (
    const RNPMars & ) [delete]
```

8.17.3.6 timestamp()

```
double jeod::RNPMars::timestamp ( ) const [override]
```

Return the last time at which the RNP was updated.

Definition at line 235 of file rnp_mars.cc.

References [last_updated_time_rotational](#).

8.17.3.7 update_axial_rotation()

```
void jeod::RNPMars::update_axial_rotation (
    TimeTT & time_tt )
```

Update rotation portion of RNP and supply RNP to dynamics manager.

Parameters

in	<i>time_tt</i>	Current TT time
----	----------------	-----------------

Definition at line 182 of file rnp_mars.cc.

References [jeod::PlanetOrientation::active](#), [jeod::PlanetRNP::FullRNP](#), [get_dyn_time_ptr\(\)](#), [last_updated_time](#)

rotational, never_updated_rotational, jeod::PlanetOrientation::planet, jeod::PlanetRNP::rnp_type, jeod::PlanetRNP::rotation, time_dyn_ptr, jeod::PlanetRNP::update_axial_rotation(), and jeod::PlanetRotation::update_time().

8.17.3.8 update_rnp()

```
void jeod::RNPMars::update_rnp (
    TimeTT & time_tt )
```

Update the complete RNP and supply it to the Dynamics Manager.

Parameters

in	<i>time_tt</i>	Current Terrestrial Time
----	----------------	--------------------------

Definition at line 119 of file rnp_mars.cc.

References jeod::PlanetOrientation::active, jeod::PlanetRNP::FullRNP, get_dyn_time_ptr(), last_updated_time_full, last_updated_time_rotational, never_updated_full, never_updated_rotational, jeod::PlanetRNP::nutration, jeod::PlanetOrientation::planet, jeod::PlanetRNP::precession, jeod::PlanetRNP::rnp_type, jeod::PlanetRNP::rotation, time_dyn_ptr, tt_ptr, jeod::PlanetRNP::update_rnp(), and jeod::PlanetRotation::update_time().

trick_units(-)

Definition at line 101 of file RNP_messages.hh.

Referenced by jeod::PlanetRNP::propagate_rnp(), and jeod::PlanetRNP::update_rnp().

8.19.5.2 initialization_error

```
char const * jeod::RNPMessages::initialization_error = "environment/RNP/" "initialization_↵  
error" [static]
```

Indicates an error during initialization.

trick_units(-)

Definition at line 95 of file RNP_messages.hh.

Referenced by jeod::PlanetOrientation::initialize(), jeod::PolarMotionJ2000::initialize(), and jeod::NutationJ2000↵
::initialize().

8.19.5.3 polar_motion_table_warning

```
char const * jeod::RNPMessages::polar_motion_table_warning = "environment/RNP/" "polar_motion↵  
_table_warning" [static]
```

Indicates a problem with the interpolation table commonly found in polar motion implementations.

trick_units(-)

Definition at line 114 of file RNP_messages.hh.

Referenced by jeod::PolarMotionJ2000::update_rotation().

8.19.5.4 setup_error

```
char const * jeod::RNPMessages::setup_error = "environment/RNP/" "setup_error" [static]
```

Indicates an error during setup of the RNP model.

trick_units(-)

Definition at line 106 of file RNP_messages.hh.

Referenced by jeod::RNPJ2000::ephem_update(), jeod::RNPMars::ephem_update(), jeod::RNPJ2000::get_dyn←_time_ptr(), jeod::RNPMars::get_dyn_time_ptr(), jeod::PlanetRNP::propagate_rnp(), jeod::PlanetRNP::update←_axial_rotation(), jeod::PlanetRNP::update_rnp(), jeod::RotationJ2000::update_rotation(), jeod::RotationMars←::update_rotation(), and jeod::PrecessionMars::update_rotation().

```
double jeod::RotationJ2000::GMST {}
```

GMST, currently saved for logging purposes.

trick_units(−)

Definition at line 125 of file rotation_j2000.hh.

8.20.5.2 nutation

```
NutationJ2000* jeod::RotationJ2000::nutation {}
```

Pointer to the J2000 nutation object, used for get obliquity information out.

Will be NULL (automatically) if anything but Full_Term_RNP is set in the [RNPJ2000](#) object `trick_units(-)`

Definition at line 105 of file `rotation_j2000.hh`.

Referenced by `jeod::RNPJ2000::initialize()`, and `update_rotation()`.

8.20.5.3 planet_rotational_velocity

```
double jeod::RotationJ2000::planet_rotational_velocity {}
```

The nominal axial rotational velocity of the earth.

`trick_units(rad/s)`

Definition at line 97 of file `rotation_j2000.hh`.

Referenced by `jeod::RNPJ2000::initialize()`, and `update_rotation()`.

8.20.5.4 theta_gast

```
double jeod::RotationJ2000::theta_gast {}
```

The last `theta_gast` (angle the earth had axially rotated) calculated.

`trick_units(rad)`

Definition at line 120 of file `rotation_j2000.hh`.

Referenced by `update_rotation()`.

8.20.5.5 use_full_rnp

```
bool jeod::RotationJ2000::use_full_rnp {true}
```

Tells the rotation object if it should use a full blown rotation formulation, or just use the time passed multiplied by the rotational velocity.

Used with the different initialization options for the main RNP class `trick_units(-)`

Definition at line 114 of file `rotation_j2000.hh`.

Referenced by `jeod::RNPJ2000::initialize()`, and `update_rotation()`.

#include "../include/RNP_messages.hh"
#include "../include/planet_rnp.hh"
#include "../include/planet_rotation.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.15.1 Detailed Description

Implement PlanetRNP.

9.16 planet_rnp.hh File Reference

Establish a framework for rotation-nutation-precession style planet attitude models.

```
#include "utils/sim_interface/include/jeod_class.hh"
#include "planet_orientation.hh"
#include "utils/math/include/macro_def.hh"
#include "utils/math/include/macro_undef.hh"
```

Data Structures

- class [jeod::PlanetRNP](#)

The generic framework for orientation models based on the RNP paradigm.

Namespaces

- [jeod](#)

Namespace jeod.

9.16.1 Detailed Description

Establish a framework for rotation-nutation-precession style planet attitude models.

9.17 planet_rotation.cc File Reference

Implementation for PlanetRotation.

```
#include "utils/math/include/matrix3x3.hh"
#include "../include/planet_rotation.hh"
#include "../include/planet_rotation_init.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.17.1 Detailed Description

Implementation for PlanetRotation.

9.18 planet_rotation.hh File Reference

Pure virtual polymorphic base class for all forms of planet rotation in the RNP model including precession, nutation, polar motion and axial rotation.

```
#include <cmath>
#include "utils/sim_interface/include/jeod_class.hh"
#include "utils/math/include/macro_def.hh"
#include "utils/math/include/macro_undef.hh"
```

Data Structures

- class [jeod::PlanetRotation](#)

The generic base class for all planet transformations.

Namespaces

- [jeod](#)

Namespace jeod.

9.18.1 Detailed Description

Pure virtual polymorphic base class for all forms of planet rotation in th RNP model including precession, nutation, polar motion and axial rotation.

9.19 planet_rotation_init.hh File Reference

Pure virtual polymorphic base class meant to be used by PlanetRotation::initialize when a large amount of data that could possibly change must be used for rotation calculation.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

- class [jeod::PlanetRotationInit](#)

The generic base class for all initializing classes for [PlanetRotation](#) derived classes.

Namespaces

- [jeod](#)

Namespace jeod.

9.19.1 Detailed Description

Pure virtual polymorphic base class meant to be used by PlanetRotation::initialize when a large amount of data that could possibly change must be used for rotation calculation.

9.20 polar_motion_j2000.cc File Reference

Implementation of PolarMotionJ2000.

```
#include <cstdint>
#include "environment/RNP/GenericRNP/include/RNP_messages.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"

Data Structures

- class [jeod::PolarMotionJ2000Init](#)

Initializes the [PolarMotionJ2000](#) object.

Namespaces

- [jeod](#)

Namespace jeod.

9.23.1 Detailed Description

Used to load data and initialize the PolarMotionJ2000 class through PolarMotionJ2000::initialize.

9.24 precession_j2000.cc File Reference

Implementation for PrecessionJ2000.

```
#include "../include/precession_j2000.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.24.1 Detailed Description

Implementation for PrecessionJ2000.

9.25 precession_j2000.hh File Reference

Model the precession for the RNP routine for the Standard Epoch J2000 This is a form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52.

```
#include "environment/RNP/GenericRNP/include/planet_rotation.hh"
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

- class [jeod::PrecessionJ2000](#)
Implements the precession portion of the J2000 RNP.

Namespaces

- [jeod](#)
Namespace jeod.

9.25.1 Detailed Description

Model the precession for the RNP routine for the Standard Epoch J2000 This is a form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52.

9.26 precession_mars.cc File Reference

Implementation of PrecessionMars.

```
#include <cstdint>
#include "environment/RNP/GenericRNP/include/RNP_messages.hh"
#include "utils/math/include/matrix3x3.hh"
#include "utils/message/include/message_handler.hh"
#include "../include/precession_mars.hh"
```

Namespaces

- [jeod](#)
Namespace jeod.

9.26.1 Detailed Description

Implementation of PrecessionMars.

9.27 precession_mars.hh File Reference

Represent the precession portion of the JPL-developed "Pathfinder" Mars orientation model.

```
#include "environment/RNP/GenericRNP/include/planet_rotation.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "nutation_mars.hh"
```

Data Structures

- class [jeod::PrecessionMars](#)

Implements the axial rotation portion of the "Pathfinder" Mars RNP model.

Namespaces

- [jeod](#)

Namespace jeod.

9.27.1 Detailed Description

Represent the precession portion of the JPL-developed "Pathfinder" Mars orientation model.

9.28 rnp_j2000.cc File Reference

Implementation for RNPJ2000.

```
#include <cstdlib>
#include "environment/planet/include/planet.hh"
#include "environment/time/include/time_dyn.hh"
#include "environment/time/include/time_gmst.hh"
#include "environment/time/include/time_manager.hh"
#include "environment/time/include/time_tt.hh"
#include "environment/time/include/time_ut1.hh"
#include "utils/math/include/matrix3x3.hh"
#include "utils/math/include/numerical.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "../include/rnp_j2000.hh"
#include "environment/RNP/GenericRNP/include/RNP_messages.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.28.1 Detailed Description

Implementation for RNPJ2000.

9.29 rnp_j2000.hh File Reference

Data Structures

- class [jeod::RNPJ2000_rnp_j2000_default_data](#)

Namespaces

- [jeod](#)

Namespace jeod.

9.30 rnp_j2000.hh File Reference

A specific implementation of PlanetRNP, for Earth.

```
#include "environment/RNP/GenericRNP/include/planet_rnp.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "nutation_j2000.hh"
#include "polar_motion_j2000.hh"
#include "precession_j2000.hh"
#include "rotation_j2000.hh"
```

Data Structures

- class [jeod::RNPJ2000](#)

Implements the J2000 RNP model using the generic RNP framework.

Namespaces

- [jeod](#)

Namespace jeod.

9.30.1 Detailed Description

A specific implementation of PlanetRNP, for Earth.

This is a form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52

9.31 rnp_mars.cc File Reference

Implementation of RNPMars.

```
#include <cstddef>
#include "environment/RNP/GenericRNP/include/RNP_messages.hh"
#include "environment/planet/include/planet.hh"
#include "environment/time/include/time_dyn.hh"
#include "environment/time/include/time_manager.hh"
#include "environment/time/include/time_tt.hh"
#include "utils/memory/include/jeod_alloc.hh"
#include "utils/message/include/message_handler.hh"
#include "../include/rnp_mars.hh"
```

Namespaces

- [jeod](#)
Namespace jeod.

9.31.1 Detailed Description

Implementation of RNPMars.

9.32 rnp_mars.hh File Reference

Data Structures

- class [jeod::RNPMars_rnp_mars_default_data](#)

Namespaces

- [jeod](#)
Namespace jeod.

9.33 rnp_mars.hh File Reference

A specific implementation of PlanetRNP, for Mars.

```
#include "environment/RNP/GenericRNP/include/planet_rnp.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "nutation_mars.hh"
#include "precession_mars.hh"
#include "rotation_mars.hh"
```

Data Structures

- class [jeod::RNPMars](#)

Implements the "Pathfinder" Mars RNP model using the generic RNP framework.

Namespaces

- [jeod](#)

Namespace jeod.

9.33.1 Detailed Description

A specific implementation of PlanetRNP, for Mars.

This is a form of the JPL-developed "Pathfinder" Mars orientation model.

9.34 RNP_messages.cc File Reference

Implement RNP_messages.

```
#include "utils/message/include/make_message_code.hh"
#include "../include/RNP_messages.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

Macros

- `#define MAKE_RNP_MESSAGE_CODE(id) JEOD_MAKE_MESSAGE_CODE(RNPMessages, "environment/RNP", id)`

9.34.1 Detailed Description

Implement RNP_messages.

9.34.2 Macro Definition Documentation

9.34.2.1 MAKE_RNP_MESSAGE_CODE

```
#define MAKE_RNP_MESSAGE_CODE(  
    id ) JEOD_MAKE_MESSAGE_CODE(RNPMessages, "environment/RNP/", id)
```

Definition at line 45 of file RNP_messages.cc.

9.35 RNP_messages.hh File Reference

Implement RNP_messages.

```
#include "utils/sim_interface/include/jeod_class.hh"
```

Data Structures

- class [jeod::RNPMessages](#)
Describes messages used in the RNP model.

Namespaces

- [jeod](#)
Namespace jeod.

9.35.1 Detailed Description

Implement RNP_messages.

9.36 rotation_j2000.cc File Reference

Implementation of RotationJ2000.

```
#include <cmath>  
#include <cstdlib>  
#include "environment/RNP/GenericRNP/include/RNP_messages.hh"  
#include "utils/message/include/message_handler.hh"  
#include "../include/rotation_j2000.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.36.1 Detailed Description

Implementation of RotationJ2000.

9.37 rotation_j2000.hh File Reference

Model the axial rotation portion of the RNP routine for the Standard Epoch J2000.

```
#include "environment/RNP/GenericRNP/include/planet_rotation.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "nutation_j2000.hh"
```

Data Structures

- class [jeod::RotationJ2000](#)

Implements the axial rotation portion of J2000 RNP.

Namespaces

- [jeod](#)

Namespace jeod.

9.37.1 Detailed Description

Model the axial rotation portion of the RNP routine for the Standard Epoch J2000.

This is a form of the IAU-76/FK5 RNP model, as implemented in Jeod 1.52

9.38 rotation_mars.cc File Reference

Implementation of RotationMars.

```
#include <cmath>
#include <cstdlib>
#include "environment/RNP/GenericRNP/include/RNP_messages.hh"
#include "utils/message/include/message_handler.hh"
#include "../include/rotation_mars.hh"
```

Namespaces

- [jeod](#)

Namespace jeod.

9.38.1 Detailed Description

Implementation of RotationMars.

9.39 rotation_mars.hh File Reference

Represent the axial rotation portion of the JPL-developed "Pathfinder" Mars orientation model.

```
#include "environment/RNP/GenericRNP/include/planet_rotation.hh"
#include "utils/sim_interface/include/jeod_class.hh"
#include "nutation_mars.hh"
```

Data Structures

- class [jeod::RotationMars](#)

Implements the axial rotation portion of the "Pathfinder" Mars RNP model.

Namespaces

- [jeod](#)

Namespace jeod.

9.39.1 Detailed Description

Represent the axial rotation portion of the JPL-developed "Pathfinder" Mars orientation model.

9.40 xpyp_daily.cc File Reference

```
#include "environment/RNP/GenericRNP/include/planet_rotation_init.hh"
